1. Harvest the sugar cane
2. Crush, soak and squeeze the cane to extract the juice and separate it from the plant material
3. Boil the juice until the syrup thickens and crystallizes
4. Spin the crystals in a centrifuge to remove liquid and produce raw sugar
5. Transport the raw sugar to a refinery to remove impurities
6. Melt the raw sugar and filter the remaining impurities and extra color to produce sugar syrup
7. Crystallize the sugar from the sugar syrup
8. Dry the sugar crystals
9. Package the sugar for distribution

Dry the sugar crystals

SUGAR CANE REFINING

Crush, soak and squeeze the cane to extract the juice and separate it from the plant material

Boil the juice until the syrup thickens and crystallizes

Spin the crystals in a centrifuge to remove liquid and produce raw sugar

Melt the raw sugar and filter the remaining impurities and extra color to produce sugar syrup

Transport the raw sugar to a refinery to remove impurities

Transport the raw sugar to a refinery to remove impurities

Melt the raw sugar and filter the remaining impurities and extra color to produce sugar syrup

Crystallize the sugar from the sugar syrup

Dry the sugar crystals

Package the sugar for distribution
